

Advanced Shift Scheduling Technology

A Smart Schedule Built Around Your Rules

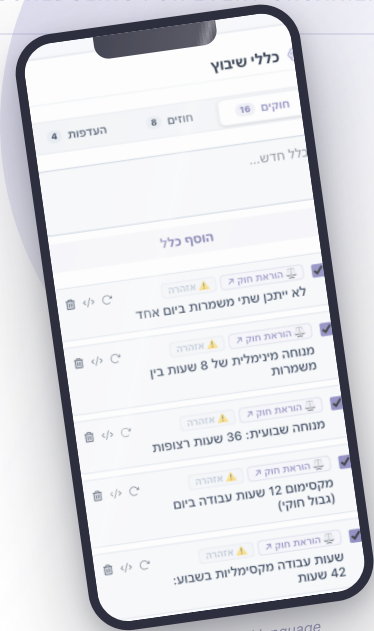

Labor laws are built into the system from day one. The manager defines organizational rules in plain language, employees fill in availability and preferences - and the optimization algorithm builds the optimal schedule in seconds.

Scheduling rules, in natural language

WHY DAYWATCH?

Automatic Enforcement of Labor Rules

The schedule is automatically verified before publishing - role coverage, rest periods, worker protections. The manager is always the final approver.

Rules in Natural Language

Define any organizational rule in plain language - tags, certifications, multi-site, and employment rates. The system checks and flags violations.

Automatic Weekly Schedule Generation

After initial onboarding, the schedule is rebuilt every week in seconds. The manager receives a ready draft, reviews and approves.

STRATEGIC VALUE

Optimal Scheduling

The engine finds the best possible shift distribution, balancing workloads, preferences and certifications across all employees.

Last-Minute Replacement

Shift cancelled? The system suggests a suitable replacement and sends a WhatsApp alert. Time saved, operational calm.

Fair Scheduling That Earns Team Trust

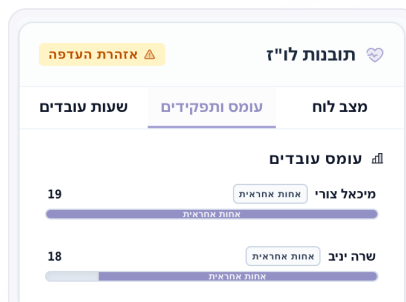

The schedule is built on clear rules. The team receives a transparent, agreed-upon assignment - disputes over night shifts and holidays become rare.

SYSTEM SCREENSHOTS

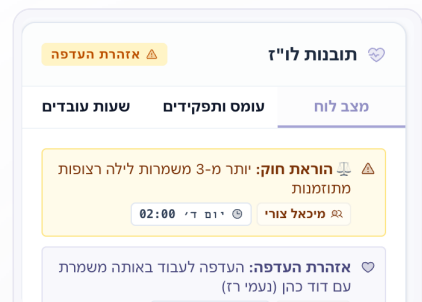

Smart Shift Assignment

The system instantly shows who is available, who is blocked, and why. Accurate assignment in seconds.

Workload Insights per Employee

Track total hours per employee throughout the week. Instantly identify overloads and gaps.

Labor Law & Preference Alerts

Summary of labor law violations and unmet team preferences, by department and schedule.

PRICING

Annual billing Multiple plans based on team size, starting at \$36/mo. Prices shown are monthly with annual billing - 10% discount vs. monthly billing.
